<p>AWS CENTRAL DATABASE & REPLICATION OPTIONS:</p> <ul style="list-style-type: none"> • Consolidate all of your weighbridge and Manual Input transactional business into one (1) Central Site for business wide data control, debtors accounting and management reports • Replication Schemas available for broadband & dial up type connectivity • Minimize costly data entry errors by using automated data replication that maintains high level of control & security • Incorporate other industrial control, equipment, procedures & measuring equipment into the one (1) powerful business database by using the AWS ESCALE Site Terminals • Seamlessly integrate data into your other business systems and databases <p>Simple Scenario: Customer has one weighbridge; main office is at a different address or site location. The weighbridge site stands alone and is fully functional while power is available. The main office central server may have modem dial capability or LAN/WAN doesn't matter which. Each evening or when systems are idol, the main site dial up or request on live systems, the wbridge site transaction data. Data is queued at both ends and is replicated between the replication server and replicant database, no messy export / import. Each new day operational databases are free to do usually business activities. This system also helps maintain good backup procedure as data may be stores on off site servers.</p>	<p>Product Preview:</p>
